```java
import java.util.Scanner;

public class addition {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        boolean running = true;

        System.out.println("Team B Calculator");

        while (running) {
            System.out.println("Select an Operation:");
            System.out.println("1. Addition");
            System.out.println("2. Subtract ");
            System.out.println("3. Multiplication");
            System.out.println("4. Division");
            System.out.print("Choice: ");

            int choice = sc.nextInt();

            if (choice == 5) {
                running = false;
                System.out.println("Exiting...");
                break;
            }

            if (choice < 1 || choice > 5) {
                System.out.println("Invalid choice. Try again.");
                continue;
```

```java
        }

        System.out.print("Enter first number: ");
        int a = sc.nextInt();
        System.out.print("Enter second number: ");
        int b = sc.nextInt();

        switch (choice) {
            case 1:
                System.out.println("Result: " + (a + b));
                break;

        }
    }

}

}
```
